As a member of our Software Engineering Group, we look first and foremost for people who are passionate around solving business problems through innovation and engineering practices. You'll be required to apply your depth of knowledge and expertise to all aspects of the software development lifecycle, as well as partner continuously with your many stakeholders on a daily basis to stay focused on common goals. We embrace a culture of experimentation and constantly strive for improvement and learning. You'll work in a collaborative, trusting, thought-provoking environment-one that encourages diversity of thought and creative solutions that are in the best interests of our customers globally.

Skills needed to be considered for this role:

- 2-4 years of Core Java and J2EE experience
- Spring framework, HTML5/React JS and MVC design/development
- Excellent Sybase and Database design, SQL
- Object-oriented design and coding practices / Design Patterns
- Agile work experience on application development in financial institutions

Skills Strongly preferred:

- BS/BA degree or equivalent experience
- Advanced knowledge of application, data, and infrastructure architecture discipline
- Perl/Unix scripting experience
- M.S degree in Computer Science or Mathematics preferred
- Excellent problem solving / investigation abilities.
- Excellent communication skills.
- Good project and time-management skills
- Experience on Scala/SPARK/HBASE/Parquet/Kafka/Big Data is a plus
